

codufidex[™] mudis

The hybrid system for a safety archiving of your documents

Make use of the advantages of digital archiving in association with the long term storage of your documents onto micro fiche.

Fast retrieval, as well as inexpensive and safe storage of information, are the most important requirements of a state-of-the-art document management system.

Use the opportunity to choose between scanning only, scanning and filming or filming only. Simultaneously capturing paper documents onto eye readable fiche and digital electronic media.

The codufidex mudis system enables to film and scan documents (in simplex and/or duplex mode) in only a few minutes.

The scanned image can be stored on the hard disk or via network to any other digital media. The system is capable of archiving documents up to a maximum width of 305 mm and a maximum length of 3,000 mm. Document feed is either hand feed (single sheet) or fully automatic from a stack of documents. Both modes utilize the electronic double page detection feature. Apart from the standard DIN-grid formats the user can choose any grid format he desires.

Digital and analog archiving

codufidex *mudis*

Please recognize, that the microfilm does not go out of date, is absolutely virusfree and is eye readable. In comparison the digital media will adjust to new requirements, i.e. programming language, operating system and technology of transmission.

The combination of safe long term storage in conjunction with optimal access speed is absolutely necessary. Our hybrid system optimizes the best of both worlds for required retention periods, access time and or data quantity.

Technical Data

- document size up to A3
- scan only, film only or both
- on-line fiche processor
- resolution 200, 300 and 400 dpi
- document feeder
- duplex scanning and filming
- automatic white compensation
- automatic color grey converting for optimal scan quality
- barcode recognition
- SDS-speed up to 45 A4-documents per minute
- Pentium work station featuring Windows scan software
- 21" high resolution monitor
- image compression and decompression
- problem free connection to different networks
- easy to use operating system
- dimensions D/W/H cm: 80/180/130 (without document table and workstation)
- weight: 300 kg
- electrical data: 230V/50Hz/1,6kW

We offer custom-made archiving solutions, proven logistics and a reliable service.
